Cybersecurity-focused CS student interested in reverse engineering, binary exploitation, and CTF-style problem solving.

EDUCATION

University of North Carolina at Chapel Hill

Chapel Hill, NC

Bachelor of Science in Computer Science; GPA: 3.6/4.0

Aug. 2024 – May 2028

Relevant Coursework: Data Structures and Analysis, Systems Fundamentals, Foundations of Programming

EXPERIENCE & LEADERSHIP

Naval Cyber Warfare Training

May 2025 – Jun. 2025

United States Naval Academy

Naval Academy, MD

- Implemented a Python socket-based web scanner to probe lab HTTP servers for SQL injection vectors, sensitive files (e.g., `robots.txt`), and outdated configurations.
- Reverse-engineered C binaries with Ghidra/x86 assembly and used GDB/GEF for runtime analysis and binary exploitation on Nightmare wargame challenges.
- Applied offensive-security techniques in a Jeopardy-style CTF across reversing, pwn, crypto, web, and programming challenges under time pressure.

Ram's Hack Treasurer and Vice President

Jan. 2025 – Present

University of North Carolina at Chapel Hill

Chapel Hill, NC

- Manage club finances and funding requests; secured \$1,000+ in university support for conference travel, training resources, and paid Hack The Box subscriptions.
- Compete on the club CTF team in events such as Duke CTF, Buckeye CTF, and university-hosted competitions across reversing, pwn, web, and crypto challenges.
- Design and lead a recurring cybersecurity bootcamp teaching Linux CLI, Python scripting, networking basics, C programming, Ghidra, and GDB/GEF for reversing and pwn.

NROTC Midshipman

Aug. 2024 – Present

University of North Carolina at Chapel Hill

Chapel Hill, NC

- Lead and mentor 15 fourth-class midshipmen in officership fundamentals, Navy/Marine Corps customs, and professional standards.
- Serve as Fundraising Midshipman-in-Charge (MIC), coordinating volunteers and events to fund battalion operations and lab activities (e.g., sailing labs).
- Participate in regular PT, leadership labs, and summer training across multiple warfare communities

PROJECTS

Web Security Scraper | *Python, sockets, BeautifulSoup (bs4)*

Jun. 2025

- Built a Python socket-based client to crawl HTTP endpoints and collect security-relevant responses in a controlled lab environment.
- Analyzed pages and parameters to flag potential SQL injection vectors, exposed files (e.g., `robots.txt`), and outdated server headers.
- Generated structured scan output to prioritize suspected vulnerable routes and misconfigurations for manual validation.

Food Finder | *Node.js, Express, MongoDB (Mongoose), JavaScript, HTML/CSS, Vercel*

Oct. 2025

- Developed an Akinator-style web app that infers user food preferences and recommends both a cuisine and restaurant.
- Implemented a modular Node.js/Express backend with decision-tree logic and Mongoose models for user and restaurant data.
- Deployed a responsive JavaScript/HTML/CSS frontend on Vercel for fast, mobile-friendly interaction.

TECHNICAL SKILLS

Languages: Python, C, Java, JavaScript, HTML/CSS

Security & Reversing: Ghidra, GDB/GEF, pwntools, bkrack, Hashcat, John the Ripper (office2john.py)

Web & Backend: Node.js/Express, REST-style APIs, MongoDB (Mongoose)

Developer Tools: Git, Docker, Linux/CLI, VS Code, IntelliJ

Data & Libraries: pandas, NumPy, Matplotlib
